

METHOD AND SYSTEM FOR ASSIGNING AND TRACKING TASKS,
SUCH AS UNDER AN ELECTRONIC AUCTION

ABSTRACT OF THE DISCLOSURE

A system for assigning and managing tasks for individuals within an organization who are working together on a larger project, such as an electronic auction. Under this embodiment, once the need to procure an item (or service) is identified, an electronic auction is scheduled, and a request for quotations (RFQ) is generated. The system automatically assigns tasks to individuals within the organization to fulfill before a scheduled auction date. Alternatively, or additionally, the system permits one or more users or individuals to manually assign tasks to others within the organization. The system may track due dates and provide notifications, including periodic reminders.
